STAT
Mr. Ben Frank

Dear Mr. Frank:

I very much appreciate your letter of April 16th and your kind remarks concerning my brother.

It was very considerate of you to write and you can be sure that your suggestions, as well as those of many other thoughtful persons like yourself, are being given careful attention and consideration by the physicians in charge of my brother's care.

With best wishes.

Sincerely,

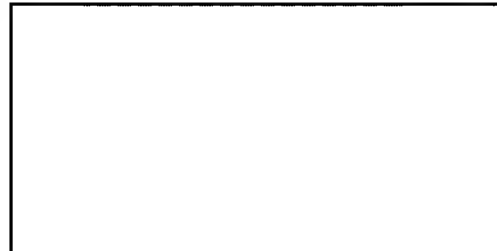

SIGNED

Allen W. Dulles

Dear Mr. Dulles,

I am an American and a medical student
in my final year at the University of

[redacted]

The news of your brother's illness has
saddened me, and I should want to help
him get well very much.

I know of a treatment for carcinoma
which would cure or improve the condition
of your brother, Mr. Dulles. It is a
substance which isn't known in America, though
discovered by a [redacted] a
polish physician and physiologist, presently
an American citizen.

modulation.

The substance which would help Mr. Dulles is ANTINEOL, also an extract of the posterior pituitary, of lipid nature. It seems to have an effect exactly opposed to that of the growth hormone. I don't have any personal experience with Antineol, but I know of its action.

STAT

[redacted] sent some ampoules to Moscow to treat a woman with stomach carcinoma, with liver and general metastases. Her doctor wrote, and I personally read the letter, where the woman, who was in bed practically moribund, got up in good condition. I don't know of the sequel, as I left New York soon thereafter. I also know of similar cases, though I haven't personally witnessed them. I don't doubt the sources of this

rather diverse group of substances
mostly or ~~entirely~~ entirely, lipids, which
have rather diverse actions on the body.

For example, I am doing my doctoral
thesis with Desferolin, a steroid lipid
from the posterior pituitary which has
a remarkable curative action on
intermittent claudication, and Atherosclerosis
(hardening of the arteries) in general. It
decreases the blood cholesterol from
30% ~~or~~ to 45% in a matter of days,
and occasionally hours. Most remarkably,
it has vastly improved the circulation in
those with Atherosclerosis. Thus a woman
of 70 years, with legs cold, blue and
painful, was able to walk without pain
after 3 ampoules of Desferolin, and her
legs became warm and the color returned.

information, as they are reliable people.
